Papers to appear in forthcoming issues

Herman Erlichson. Passage to the limit in Proposition I, Book I of Newton's *Principia*

Andreas Kastanis. The teaching of mathematics in the Greek military academy during the first years of its foundation (1828–1834)

Mircea Radu. A debate about the axiomatization of arithmetic: Otto Hölder vs Robert Graßmann

Richard L. Kremer. Thoughts on John of Saxony's method for finding times of true syzygy

Michael Nauenberg. Kepler's area law in the *Principia*: filling in some details in Newton's proof of Proposition 1

Steven N. Shore. Macrocosmos/microcosmos: celestial mechanics and old quantum theory

Adrian C. Rice and Robin J. Wilson. The rise of British analysis in the early 20th century: the role of G.H. Hardy and the London Mathematical Society

Michael Meo. The mathematical life of Cauchy's group theorem

João Caramalho Domingues. Variables, limits, and infinitesimals in Portugal in the late 18th century

Della Dumbaugh Fenster. Funds for mathematics: Carnegie Institution of Washington support for mathematics from 1902 to 1921
